

Liquid Gold Poppers

So **what are poppers**. Today poppers including liquid and pure gold poppers are a liquid that has been around for decades made up with a nitrate or nitrite chemical background. They have actually been around for centuries. These days most come in brown strong glass bottles of a contents average of 9mls.

How do you use poppers?

Most directly inhale the liquid aromas from the bottle direct into the nose. The manufacturers instructions say otherwise. Allow the contents to breath naturally in a room, So the advise is follow the instructions. More important of course is there are complications so this leads us onto.

What are the dangers of poppers?

Some users should not use poppers as the effects of inhaling poppers raises the blood pressure and likewise raises the heart rates. So anyone with a heart or pressure problem should not use them and likewise the manufacturer states the warnings clearly on the bottle label. The most dangerous is if they are swallowed and if so seek medical advice immediately and induce vomiting as a first line of defence. [Liquid gold poppers](#) have long been on the stock shop shelves and its a typical brand coming in 9ml bottles or extra strong versions of perhaps larger amounts for a special run. We at our poppers shop do promotional runs so best advice is watch and bookmark our poppers shop.
